

Hello,

I am excited to apply for the Frontend Developer role at Darbuka. With over four years of experience in frontend development, particularly with React.js, Next.js, and TypeScript, I have built and optimized high-performance web applications that enhance user experiences and streamline business operations. My background in full-stack development also allows me to collaborate seamlessly with backend teams, ensuring smooth API integrations and scalable architectures.

In my recent role at Skew, I developed and maintained frontend features using Next.js, implemented Redux for efficient state management, and optimized performance, resulting in a 15-20% improvement in load times. My experience integrating GraphQL and REST APIs ensures efficient data fetching, while my work with authentication frameworks like NextAuth.js has strengthened security implementations in my projects.

Beyond technical expertise, I take pride in my problem-solving skills and ability to thrive in fast-paced environments. I enjoy working collaboratively, mentoring junior developers, and contributing to a culture of best practices. My hands-on experience with Git, microservices architecture, and AWS-powered backends further supports my ability to integrate seamlessly into your development team.

I am eager to bring my expertise to Darbuka and contribute to building scalable, high-quality user interfaces. I would welcome the opportunity to discuss how my skills and experience align with your team's needs. Please feel free to reach out to schedule a conversation.

Looking forward to your response.

Best regards,

Hadi Makki
